

ASSIGNMENT 6 – TEMPLATE

Problem 9-1A (25 minutes)

Part 1

	<u>Land</u>	<u>Building Two</u>	<u>Building Three</u>	<u>Land Impmnts. One</u>	<u>Land Impmnts. Two</u>
Purchase price*	2924800	1051100	0	594100	0
Demolition	703160	0	0	0	0
Landscaping	272020	0	0	0	0
New building	0	0	2476000	0	0
New improvements.....	<u>0</u>	<u>0</u>	<u>0</u>	0	254600
Totals	<u>3899980</u>	<u>1051100</u>	<u>2476000</u>	<u>594100</u>	<u>254600</u>

*Allocation of purchase price:

	Appraised value	% of total	Apportioned cost
Land	2990720	64%	2924800
Building two	1074790	23%	1051100
Land improvement one	607490	13%	594100
Total	4673000	100%	

PART 2

	Particulars	DR	CR
31-Mar	Land a/c	3899980	
	Building two a/c	1051100	
	Building three a/c	2476000	
	Land improvement one a/c	594100	
	Land improvement two a/c	254600	
	To cash a/c		8275780

Problem 9-5A (25 minutes)

Year	Depreciation Method ¹ :		
	Straight-line	Double-declining balance	Units-of-production ²
2023	53000	138000	34560
2024	63600	138000	85440
2025	63600	110400	73680

1. Depreciation is calculated to the nearest month.
2. Assume actual hours of service were: 2023: 720; 2024: 1,780; 2025: 1,535.

Analysis component:

Single line method:

$$(828000-192000)/10$$

$$= 63600 \text{ Annual}$$

$$\text{Monthly} = 63600/12$$

$$= 5300$$

$$\text{Depreciation for march to December: } 5300 * 10$$

$$= 53000$$

Double Declining method

$$\text{Depreciation rate} = 1/10 * 2$$

$$= 20\%$$

$$2023 = 828000 * 20\%$$

$$= 165600$$

$$= 165600 * 10/12$$

$$= 138000$$

$$2024 = (828000 - 138000) * 20\%$$

$$= 138000$$

$$2025 = (828000 - 138000 - 138000) * 20\%$$

$$= 110400$$

Units-of-production

$$2023 = (828000 - 192000) / 13250 * 720$$

$$= 34560$$

$$2024 = (828000 - 192000) / 13250 * 1780$$

$$= 85440$$

$$2025 = (828000 - 192000) / 13250 * 1535$$

$$= 73680$$

Problem 9-11A (20 minutes)

2023

Mar. 26

Delivery truck a/c DR	96200
To cash a/c	96200

Dec. 31

Depreciation cost	12930
To accumulated depreciation	12930

2024

Dec. 31

Depreciation cost	21160
To accumulated depreciation	21160

1.

Depreciation for 31st December 2023= Cost of machine-Salvage value/life

$$= [(92000+4200)-10000]/5$$

$$= 17240*9/12$$

$$= 12930$$

2.

Depreciation for 31st December 2024

= $96200 - 12930 - 14500 / (4 - 9/12)$

= 21160

Problem 9-16A (45 minutes)

1.

2023

Jan. 2

Cash a/c DR	116900
To Machinery a/c	116900

3

Machinery a/c DR	4788
To accounts payable a/c	4788

3

Machinery a/c DR	1512
To accounts payable a/c	1512

2.

2023

Dec. 31

Depreciation a/c	58460
To accumulated depreciation a/c	58460

2028

Sept. 30

Cash a/c	21000
To machinery a/c	

3(a).

3
0

Cash a/c DR	21000
Accumulated depreciation a/c DR (85400+12810)	98210
Loss on disposal a/c DR (123200-21000-98210)	3990
To machine a/c	123200

3(b).

3
0

Cash a/c	27300
Accumulated depreciation a/c (85400+12810)	98210
To gain on disposal a/c	2310
To machine a/c	123200

3(c).

3
0

Cash a/c	25760
Accumulated depreciation a/c	98210
To gain on disposal a/c	770
To machine a/c	123200

Working

	116900
Add: Repaid before installation	4788
Add: Installation cost	1512
total machine cpost	123200
less: residual value	20720
depreciation	102480
Annual depreciation	17080
book value on 1st Jan	123200
less : depreciation till 31st December	85400
less: half year depreciation	12810
book value	24990
